FOREWORD

Fishery Statistics of Myanmar for fiscal year 2007-2008 is published by the Department of Fisheries, Ministry of Livestock and Fisheries. Since the fiscal year 2001-02, it has been published the Fishery Statistics of Myanmar for the purpose of ideas to present data and information concerning fisheries and for more understanding of Myanmar Fisheries and the activities of Myanmar Fisheries.

Fishery statistics can serve many goals, such as sustainable use of resources, for food security, to get more national income for foreign exchange, for predicting and planning in fisheries management both in short-term and long-term as well as to monitor the status and trends of the fisheries and so on.

It is clear that the fishery statistics is considered so as to know the current and past status of the fisheries and it can be used for the planning and management in the development of its sector. So we hope that this Fishery Statistical Year Book will benefit and help those who take interested in fisheries and all of the users.

On behalf of the Department of Fisheries, I would like to take this opportunity to express my profound gratitude to Brig-Gen Maung Maung Thein, Minister for Ministry of Livestock and Fisheries for his valuable guidance and necessary support.

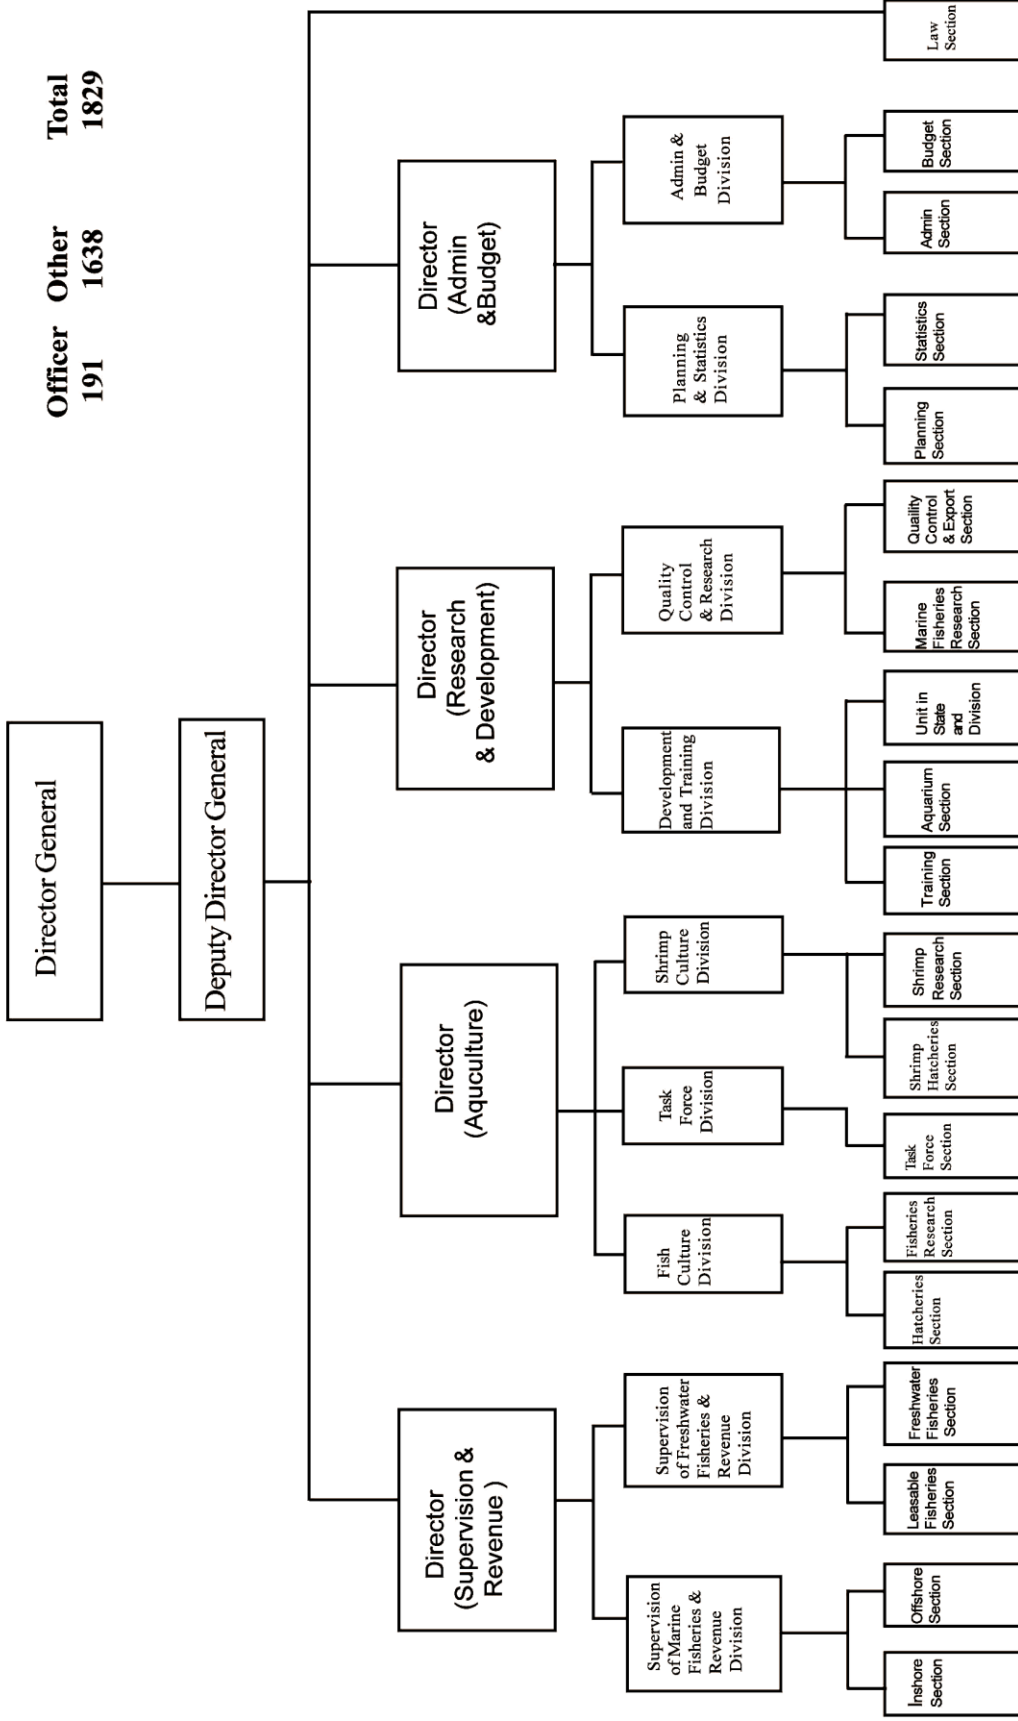

I would also like to express our deep gratitude to the former Director-General, Directorate of Livestock and Fisheries (DoLF), U Kyaw Lwin, for his kindness and support. My thanks to the newly appointed Director-General for DoLF, U Myint Swe, and the former Director-General for DoF, U Than Tun for their goals, ideas, and suggestions for the development of Fisheries in Myanmar and their cooperation to work ever more closely.

Last but not least, my thanks goes to Deputy Director-General, U Khin Ko Lay and Directors as well as all staff officers, especially to U Tint Swe, Deputy Director from the Department of Fisheries for their contribution and strenuous efforts in compiling and materializing this publication.

Khin Maung Aye
Director-General
Department of Fisheries

PART TWO

**MYANMAR FISHERIES
IN BRIEF**

National Policy on Fishery Sector

- (1) To promote all-round development in the fisheries sector;
- (2) To increase fish production for domestic consumption and share the surplus with neighbouring country;
- (3) To encourage the expansion of marine and freshwater aquaculture;
- (4) To upgrade the socio-economic status of fishery communities.

The Responsibilities of Department of Fisheries for Development and Management

- (1) Conservation and rehabilitation of fishery resources;
- (2) Promotion of fisheries researches and surveys;
- (3) Collection and compilation of fishery statistics and information;
- (4) Extension services;
- (5) Supervision of fishery sectors;
- (6) Sustainability of fishery resources.

The Fishery Development Plans in (2006-2007 to 2007-2008)

National Fisheries Development Plans

- (1) Planning for supporting to expansion of coastal aquaculture.
- (2) The Department of Fisheries initiated environment-friendly schemes in intensive shrimp farming, and is encouraging the private farmers;
- (3) Provide financial assistance and loans through "Livestock and Fisheries Development Bank".
- (4) Expansion of rice-fish culture program for development of rural area.
- (5) Three years' shrimp culture development plan (2nd phase).
- (6) Planning for public awareness for conservation of fishery resources.

Natural Resource Management Policies

- (1) Set up strategy to increase fish production by stocking fish and prawn seeds into dams, reservoirs and natural water bodies;
- (2) Lease holders have to hold fish seeds in pens, to release at the beginning of next season. In this way, there is significant increase in fish production by such culture based capture system in Myanmar;
- (3) Promoting education programs related to conservation and rehabilitation of fisheries resources.

Related Marine Research

- (1) Data collecting on some marine aquatic animals (shark, turtles, mammals);
- (2) Marine fisheries resources survey with the assistance of SEAFDEC;
- (3) Ayeyarwaddy Dolphin Surveys;
- (4) Mariculture practices.

Other Planning

- (1) Capacity building on improving fishery statistical system in collaboration with SEAFDEC;
- (2) Implementation of HACCP system in fishery products industries;
- (3) Sustainable fisheries and Mariculture for rural livelihood development programme in collaboration with JICA;
- (4) Training and demonstration on various aquaculture techniques;
- (5) Planning for fishery sectors development;
- (6) Strengthening of fisheries laws enforcement.
- (7) Biodiversity conservation with the assistance of Biodiversity and Nature Conservation Association (BANCA).

Freshwater Fisheries

There is no doubt that the south-west monsoon brings rain from the Bay of Bengal and the favourable flow of rivers in Myanmar allowing the migration and breeding of most species of fishes and prawns. Myanmar has impressive freshwater fisheries with 1.28 million hectares perennial waters and 6 million hectares inundated flood plains during the rainy season.

Freshwater fisheries are mainly situated on the riverine system of the country. The main rivers in Myanmar are the Ayeyarwady, Chindwin, Sittaung and Thanlwin. Moreover, Myanmar is endowed with the abundance of water resources in the form of rivers, streams and lakes. Most of the Myanmar like more freshwater fish than marine fish. So the freshwater fisheries (inland fisheries) are mainly provided to the people of Myanmar for food security, as well as for getting the opportunity of employment in fishery communities from rural areas. Some researchers said that Myanmar potential in inland fisheries is much more exceeding than other national part of the Mekong River Basin.

Marine Fisheries

Myanmar sea is pollution free which is a clean and green sea.

1. Location

The Length of the coast line from the mouth of Naaf River to Kawthaung (Victoria point) is approximately (2832 kilometers). The area of the continental shelf from coast line is (228, 781 sq kilometers).

The sovereign right of the Myanmar is 12 nautical miles from the baseline to the sea ward, and the Exclusive Economic Zone (EEZ) is 200 perpendicular nautical miles from the baseline to sea warded. So, the area of fishing is (486,000 sq kilometers) including EEZ. The fishery sector is the most important role in economic status of Myanmar.

2. Fishing Grounds

Coastline of Myanmar can be divided into three coastal regions, they are Rakhing region, the Ayeyarwaddy or Gulf of Mottama region (Delta zone) and the Taninthayi coastal region.

2.1 Fishing grounds of Rakhine state

Rakhine coastal region stretches (740 kilometers) from Naaf River to Mawdin point and covered an area of (56790 sq km), the landing sites are located in Sittwe, Kyauk Phyu, and Thandwe.

2.2 Fishing grounds of Ayeyarwaddy

There are nine tributaries of the Ayeyarwaddy River, this area is flowdown together with the Sittaung, Than Lwin rivers enters to Andaman Sea. The area of the delta is (152038 sq km).

2.3 Fishing ground of Tanintharyi

Tanintharyi coastal zone covers an area of south of Mottama up to the mouth of Pachan River includes Myeik Archipelago and the Andaman Sea. The length of

the main coast is about (1,200 km), the Myeik Archipelago extends from Mall Island to Similand Islands and consists of about 800 islands covering an area of about 181392 sq km.

- 89 -

3. Marine Resources of Myanmar

According to the survey result of the marine fishery, it was noted about 1.0 million metric ton of pelagic fish and 0.8 million ton of the demersal fishes. It can be exploited 0.5 million metric ton of pelagic fishes and 0.55 million metric ton of demersal fishes as a annual maximum sustainable yield (MSY).

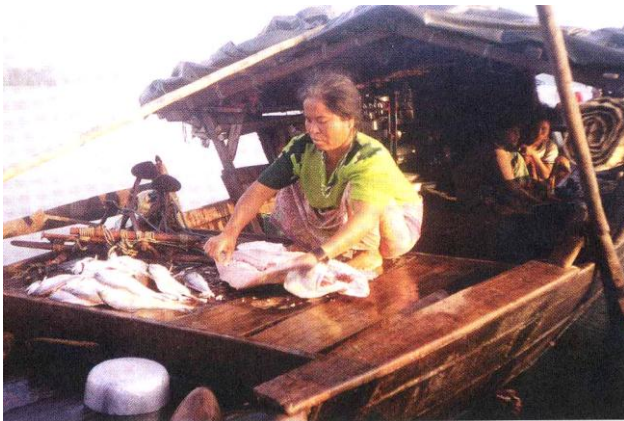

This survey result is estimating between (200) meter depth, area covers (225,696 sq km), it is need to survey the un-survey area out of the (200) meter depth to the EEZ.

4. Fisheries Industries in Myanmar

In Myanmar marine capture fisheries can be categorized into two main types called coastal or inshore fisheries and offshore fisheries.

4.1 Inshore fisheries

The inshore fisheries, where the fishing boats operates within from shoreline to (5) nautical miles in the northern area, (10) nautical miles in the southern area. The fishing vessel range form traditional type to commercial vessels of less than 30 feet or using less than a 12 HP engine operating in in-shore area. The fishing gears used are drift net, gill net and long line.

4.2 Offshore fisheries

The Offshore fishing vessels operate beyond from outer limit of the Inshore fishing zone to EEZ. The fishing vessels are more than 30 feet long or using more than 12 HP engine operating in off-shore area. Normally, commercial fishing gears are Trawl net, purse seine, and long line.

5. Fishing Rights for Foreign Fishing Vessels

In Myanmar, there are two programmes to fish in the Myanmar water, which is the Foreign Fishing Vessels will be allowed to fish into Myanmar's water. One is Fishing Right and another is Joint-venture programmes. Fishing Right programme is being granted to one company from foreign nation according to the existing Laws of the fishing right for foreign fishing vessels. The other companies which are interested in conducting fishing activities can also be enjoy this programme under the company which is nominated or selected or existed by means of cooperation.

At the present time, DoF of Myanmar has been granted the Fishing Right Programme to Siam Jonathan Co., Ltd. From Thailand, because of their proposal and allowed to fish within Exclusive Economic Zone, to operate fishing activities with 500 fishing vessels for the period of five years.

6. Opportunity for Investment

Union of Myanmar has enormous fishery resources with a rich diversity of renewable marine flora and fauna. That is the good opportunity to invest the foreign countries that are willing to come and invest in Myanmar.

AQUACULTURE

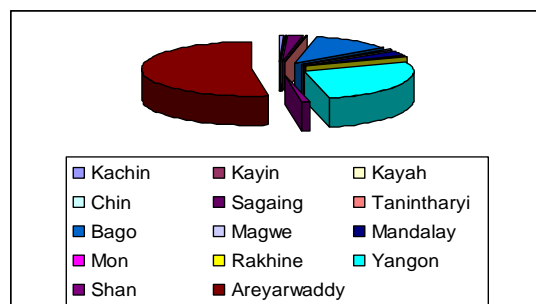

A. Freshwater Aquaculture

Legend of aquaculture development can be identified into four periods as follows:-

1. 1954 to 1970: Freshwater finfish culture was initiated with exotics species like gouramy, tilapia and common carp that were not so much favorite among farmers. In 1967, induced breeding on rohu was successful. However, that period can be identified as early period of freshwater aquaculture.
2. 1971 to 1989: During to this period, seed production of major carps, Chinese carps and other commercially important species was succeeded. Freshwater fish culture became popular among the farmers.
3. 1990 to 1999: The Law Relating to Aquaculture was promulgated by the State Law and Order Restoration Council and development of freshwater aquaculture was accelerated due to law enforcement.
4. 2000 to 2007: At present, there are over 80,000 hectares of fish pond in the whole country. Also existing shrimp ponds amounts to 82036.4 hectares. Myanmar has now the pangasius culture in steel screen cages in Ayeyarwaddy river. The Department of Fisheries has launched special operation on tilapia culture and shrimp culture project. On the other side there are one abalone farm at Chaungtha, one sea-weed farm at Myeik area, baby clam culture at delta and coastal area. Department of Fisheries has established at least two marine fish seed production research stations at Tha Zin and Myeik. In the near future it is expected that more advanced farmings of marine organisms are to be implemented. These are the significant landmarks of aquaculture development in Myanmar.

In 2006-2007 area of freshwater fish pond amounted to 212234.279 acres and the existing fish pond areas as of the State/Division wise is mentioned in the following pie chart.

**Freshwater fish pond area in acre
(2006-07)**

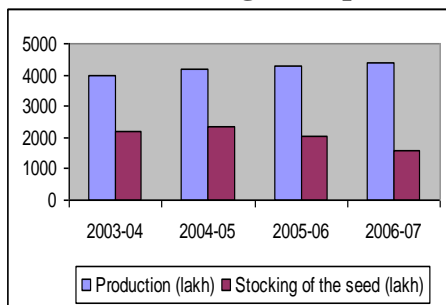

There are 27 freshwater fishery stations that mainly conduct seed production and research works in terms of freshwater aquaculture purposes. The fishery stations have been established in all States and Divisions at strategic areas.

The Department of Fisheries has increased the momentum in producing quality fish seed after expansion Aquaculture Division with new organization that enables successful seed production of 20 freshwater finfish species. Simultaneously the Department so as to replenish the natural resources has stocked the quality fish seed into open waters like rivers, dams, reservoirs,

lakes and impoundments. Data on production and stocking of seeds from 2003-2004 to 2006-2007 appears as a graph thereunder.

In order to increase fish production and substantiate subsidized income, Department of Fisheries has initiated the paddy cum fish farming where it is appropriate. In this year 13122 acres of paddy field in States and Divisions were stocked with fish seed as in the following figure.

Fish seed stocking into open waters

Paddy cum fish culture

At present, the grow-out culture of freshwater finfish is well established and in some area like Ayeyarwaddy and Yangon Divisions almost 3000 viss of fish (about 4.8 ton of fish) per acre per annual is possibly through proper pond design, feeding and management.

B. Shrimp/ Prawn Aquaculture

a. Freshwater prawn culture

The most common and prioritized species is giant freshwater prawn, *Macrobrachium rosenbergii*. Myanmar has gained much interest in freshwater prawn aquaculture. Hatchery technology was attempted in 1980s and little success was obtained due to lack of technology on hatchery grow-out operation. Myanmar has a very rich fishery resource of commercially important freshwater prawn species. Monoculture of *M. rosenbergii* was conducted on semi-intensive level and a result on low production was gained. Then the farmers usually practice polyculture of prawn and fish where prawn is minor crop species. This is also to minimize the operational cost. It is difficult to know exact area of prawn monoculture farms. However it is roughly denoted that there may be about 3000 hectares of prawn and fish polyculture farms in the whole country. The technology of hatchery operation becomes well established in both government and private sector.

b. Marine shrimp aquaculture development

Generally Myanmar has three types of shrimp farming existing as (1) Semi-intensive or intensive shrimp pond area of 5369.99 acres (2) Extensive plus types shrimp pond area of 55897.61 acres and (3) Extensive or traditional types of shrimp pond area of 155995.11 acres totaling 217262.71 acre. In comparison to the year 2003-04, traditional types of shrimp pond area were found decreasing due to natural hazards like cyclone followed by flood and deterioration of shrimp ponds. However the figures show that semi-intensive or intensive and extensive plus type shrimp ponds areas are found increasing. Despite the constraints in terms of arising prices of feed,

fuel and other overhead costs, the shrimp farmers kept on farming the shrimp. On the other side shrimp seed production amounted to 168.16 million and it was found that the production met the required seed demand. The shrimp grow-out culture in the newly constructed shrimp ponds in Myeik area has indicated better results and ideal site for shrimp grow-out culture. In addition to indigenous species of *Penaeus monodon*, the shrimp farmers have become more interested in culturing a new exotic species of *P.vannamei*. Department of Fisheries as the sole competent authority of fisheries sector, fully understands that *Penaeus vannamei* has the many advantageous factors for culture but it may also cause the negative impact to other shrimp aquaculture industry. DOF has been aware that vannamei may carry and outbreak the taura syndrome virus (TSV). After a regional workshop in 2005 at Manila, that assessed the culture of vannamei ASEAN countries agreed to culture at reasonable documentation. At present 3-4 private farms are trying experimental culture of vannamei.

C. Other Aquaculture practices (Mariculture)

I. Mud crab culture

A fattening practice on mudcrab and processing of soft shell mudcrab is also booming culture business in Kyun Su township, Tanintharyi Division owned by Kaung Kaung Company Limited. This is commercial, commanding high price and sole in Southeast Asean countries.

II. Marine finfish culture

a. Grouper and red snapper

Marine finfish culture through net cages have been practiced in southern coastal area of the country. Seed production of marine finfish has not yet been successful and the farmers collect the seed from the wild. The species are groupers and snappers. Marine circular net cages are also at Myeik in southern coastal area. That is collaborative attempt with DOF and private sector.

b. Sea-bass

Seed production of sea-bass has been recently succeeded by the private sector. At present, sea-bass culture in earthen pond is gaining interest among the farmers.

III. Sea weed culture

A Korean company by the name of MSC(Make Smart Company) conducted an experimental culture of seaweed, *Eucheuma cottoni* in the southern coastal area in 2005 and successful results was achieved. The company currently has submitted a proposal on

implementation of processing factory and commercial scale culture of the said sea-weed on the basis of 100 percent foreign investment.

- 93 -

IV. Sea-bed culture

Culture of mollusc like baby clam, *Meretrix spp.*, blood cockle *Anadara spinosa* is well established in some Asian countries. However this type of culture is not common in Myanmar and it may be due to lack of biotechnology and ignorance of economic viability. Myanmar has some shallow sea area where hard clam or baby clams are abundantly found. A lot of local people are harvesting during low tide. It is also a type of sea ranching of which the operation cost is minimal.

Fish Inspection and Quality Control Division

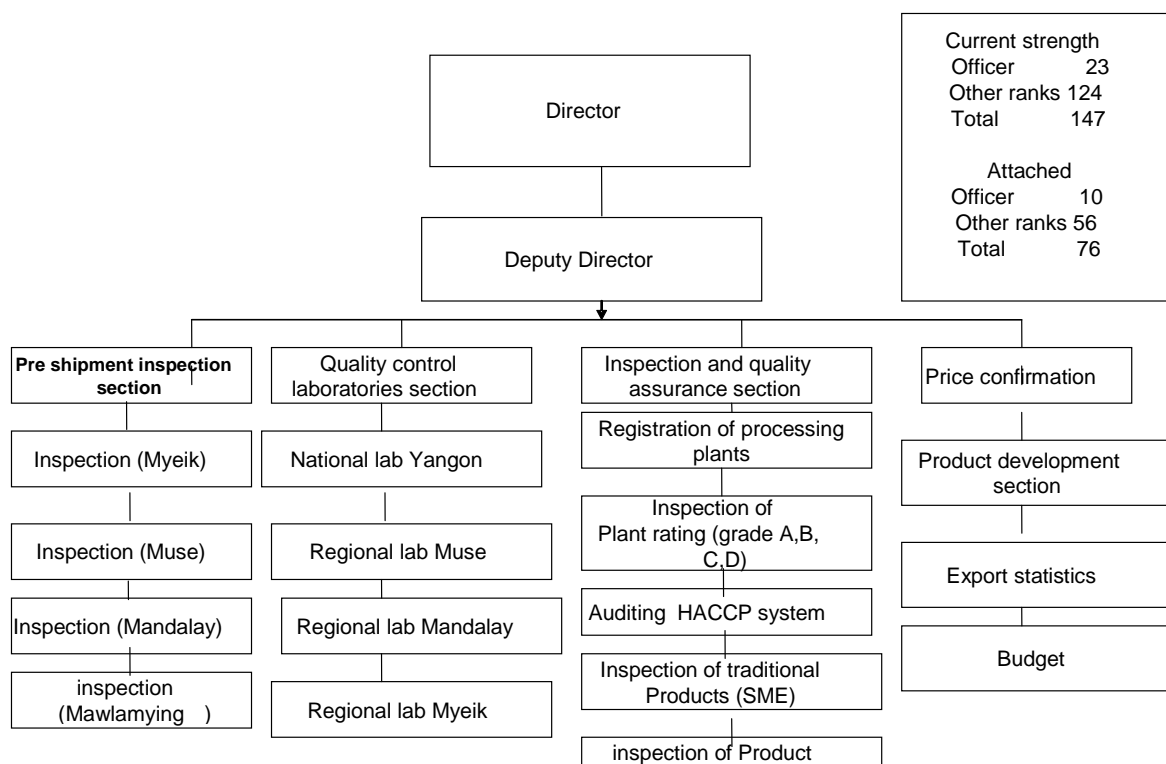

Objectives of F.I.Q.C Division

- Sustainable utilization of fish and fishery products.
- To monitor the safer fishery products production for local consumption and export according to international standards.
- To comply with Code of Conduct for Responsible fisheries Article 11 and Regional Code of Conduct for post harvest practices and trade.
- Implementation of ASEAN Road Map for the integration in fisheries sector of specific measure regarding to post harvest.
- Review and revise the rules and regulations for post harvest practices to be equivalent with international requirements .
- To apply GMP,GHP, & HACCP and GAP system in processing factory and aquaculture respectively.
- To apply HACCP based inspection system by DOF to achieve Quality and Safety Purposes.
- To comply with ISO 170265 in Quality control Laboratories.
- To encourage value added products production in future by the requirements of importing countries and international standards specifications.

Role of FIQC Responsibility and Authority of FIQC

- ❑ The Department of Fisheries is mostly responsible for development of fishery's industry,
- ❑ Department of Fisheries is competent authority responsible for the inspection and Licensing all export oriented fish processing plant and post harvest Technology in Myanmar .
- ❑ Encouraging to implement food safety system in industry such as GMP/GHP/HACCP/ISO 22000/ISO 14001 and also GMP for small and Medium scale enterprises.

Fish Inspection and Quality Control Division

Future plan of Lab. Extension of Regional Laboratory.

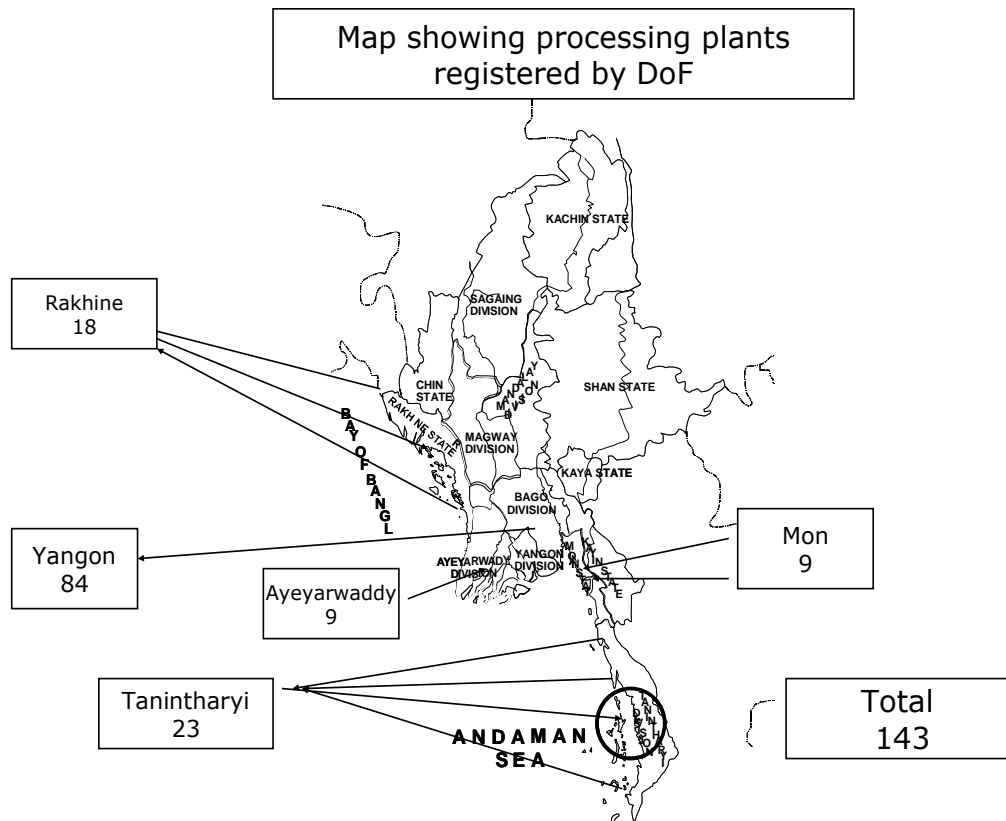

- Regional Laboratory at Rakhine State
- Regional Laboratory at Mon State.

To establish new parameters at main Laboratory.

- Genetic Modify Organism (GMO) testing Laboratory
- Food contact Material testing Laboratory
- Mycotoxin (Alfa toxin etc.)
- Organolaptic Lab. (Sensory Tests)

Future plan

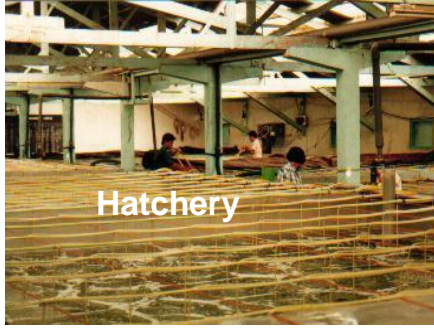

- To up-date existing directives according to EU market requirement specifically for food safety purposes to be completed in December, 2009.
- To submit the drug residue monitoring plan to EU commission.

REGIONAL ACTIVITIES of Post harvest sector

- ASEAN RAPID ALERT SYSTEM
- RCCRF (POST HARVEST PRACTICES & TRADE)
- Implementation of GMP, HACCP in SMEs and Export industries
- ASEAN ROAD MAP OF INTEGRATION IN FISHERIES SECTOR Measure No.45
- Early warning system on hazard and outbreak measure No.60

Integrated Quality Assurance System

**Research and Development
Training Supervision Section
The trainings conducted in the fiscal year 2006-2007**

No	Training Courses	No of Time	No of trainees	Location
1	Township Fisheries Officer Training Course	3	87	IFT
2.	Fisheries Inspection and Quality Assurance Training Course.	3	106	IFT
3.	On-site Training Course on Safety and Quality assurance of Frozen Products.	7	294	IFT, Yangon, Myeik, Sittwe (Total 33 Factories)
4.	Computer Training Course.	6	78	IFT
5.	Mending of Fishing Net Training Course.	4	51	Sagaing, Hlawgar, Kume, Yaenanthar, Shwebo.
6.	Aquaculture Training Course.	7	118	Sagaing(3), Phyarpon(1), Hlawgar(2).
7.	Marine Turtle Conservation training Course.	2	76	Myeik, Sittwe.
8.	Good Laboratory Quality Management Practices and Method Validation Training.	1	39	Tharketa Lab
9.	On-site Training on Drug Residue Nitrofurantoin.	1	10	Tharketa Lab.
10.	Water Quality Control Training Course.	2	45	Tharketa Research
11.	Fish Health Management Training Course.	1	10	Tharketa (Disease)
12.	Shrimp and Prawn Health Training Course.	1	20	MFF
13.	On-job Training Course on Inland Fisheries.	1	60	Phyarpon
14.	English Language Training for trainers	1	20	IFT
15.	Fisheries Management On-job Training Course	1	20	Sagaing
	Total	41	1034	
16.	Fisheries related Lecture to Others Department	18	5357	
17.	Sending Department staff to attend training courses (conducted at others Organization.)	6	13	

Activities Conducted by Marine Fisheries Research Section 2006-2007

1. Ayeyarwady dolphin Conservation Conducted by Department of Fisheries in the Ayeyarwady River

Ayeyarwady (Irrawaddy) River is one of the biggest rivers in Southeast Asia, and it's the most dominant feature in Myanmar (Burma). This arises from Northern hill streams and through steep gorges upstream of Bhamo, and then flow the entire length of the country, for approximately 2,200 km, before the reaches of the Andaman Sea.

The 19th century naturalist John Anderson described Ayeyarwady (Irrawaddy) dolphins in the Ayeyarwady River as morphologically distinct from *Orcaella brevirostris*.

Ayeyarwady dolphin in the Ayeyarwady River.

Cast-net fishermen waiting Ayeyarwady dolphin signal.

Cooperative fishing between Ayeyarwady dolphin and fishermen is a kind of traditional fishing, which practice long time ago; and it's never been described in the world fisheries records.

The fishermen said they could catch more fish when fishing with the dolphins then without dolphins. Sometime they could catch up to 40 to 80 kilo, a fishermen also told that they could live well almost a month without doing anything if they could get such a good catch.

Cooperative fishing is a mutually benefit technique for both fishermen and dolphins. It has been maintained and passed down culturally in both human and dolphin since very long time ago. The Department of Fisheries, DoF (Myanmar) protected and conserved the Ayeyarwady dolphin between Mingun and Kyaukmyaung, 72 kilometers segment of Ayeyarwady River. Every year the survey team from the DoF conducted visual boat base survey, and estimate the population and group size and threats to the dolphins. DOF already printed poster for people awareness and some

pamphlet to the local communities who live along the both river side. Myanmar is the only one country for Eco-tourism who can an enjoy cooperative fishing practice with Ayeyarwady dolphin and cast-net fishermen.. In the open season, and at the upper the Ayeyarwady River, the cooperative fishing practice between dolphin and cast-net fishermen were the famous among the tourist from many countries.

2. SEA TURTLE CONSERVATION AND MANAGEMENT IN MYANMAR (2006-2007)

Sea turtles are one of the most valuable and rare marine animals inhabiting in Myanmar waters. Nesting of turtles is observed around Andaman Sea, Gulf of Mottama (Gulf of Mattaban), Thameehla Island and Bay of Bengal.

Since 1963, the Department of Fisheries (DoF) has taken up a project to propagate and conserve sea turtles on Thameehla Island (Diamond Island) in Ngaputaw Township, Ayeyarwady Division. Then in 1986-87, the project was fully revived and hatchery was established with skillful technicians.

Although Myanmar started sea turtle conservation since 1986 the momentum of the activity was not accelerated until. Myanmar became a member of Southeast Asian Fisheries Development Center (SEAFDEC) in 1999. As a member, Myanmar was able to participate in trainings and workshops related to conservation and enhancement of turtle conducted by SEAFDEC. At present, Myanmar is being cooperated and collaborated with many institution namely ASEAN-SEAFDEC, and Memorandum of Understanding on Conservation and Management of Marine Turtle and their Habitat of the Indian Ocean and Southeast Asia (IOSEA-MoU).

Five species are commonly seen in Myanmar nesting regularly. They are Olive Ridley (Leik Hlaung), Loggerhead Turtle (Leik Khway), Green Turtle (Pyin Tha Leik), Hawksbill Turtle (Leik Kyet Tu Yway), and Leatherback Turtle (Leik Zaung Lyar). However, Loggerhead and Leatherback Turtle are assumed almost extinct. They were reported by fishermen from some parts of Taninthayi Coastal areas and are totally absent in the Mon, Rakhine and Ayeyarwady Delta Coastal areas. Hawksbill Turtles are found in the Taninthayi and Rakhine Coastal areas, and Green turtles in the Mon, Taninthayi, Rakhine, Ayeyarwady and Coco Island, Olive Ridely turtle in the Mon and Ayeyarwady.

The Department of Fisheries is exerting continuous efforts to conserve these national heritages with the following objectives;

To preserve and restore spawning, feeding and nesting habitats;

To make nesting beaches acceptable to turtles by eliminating the adverse impact through law enforcement;

To implement beaches cleaning program and prevent exploitation activities;

To minimize waste and to prevent pollution of the marine environment, and

To increase public awareness and participation in Sea Turtle Conservation through extension and education activities.

3. The Marine Resources Survey in Myanmar in 2006

Researchers and Crew Members were greeted by DoF staff at Myeik Jetty

Officials and Staff from M.V. SEAFDEC 2 were greeted at the jetty by DoF Officials

Planning and Statistical Division

Statistics is obtained through three main processes, data collection, data compilation and analysis, and dissemination of it. It is now being used as a tool for planning and decision-making in almost all the fields.

The objectives of fishery data collection

- (1) To fulfill the requirements of information for the users in relation to fishery sector;
- (2) To access and focus fisheries resources potential and productivity;
- (3) Prediction and planning sustainable fisheries management;
- (4) Making policy and decision on fishery sector;
- (5) Formulating and developing essential processes for long term monitoring and management.

There are many goals in fishery statistics, such as sustainable use of resources, for food security, to get income for exchange earning, to increase fish production, and to know about the livelihood of fishers and fish-farmers, biodiversity and environment. However, without reliable, relevant and timely data, the effective fishery management and policy-making are impossible. That is why, fishery statistics is necessary in every planning, and in every activity in the business of the fisheries.

How to collect the fishery data, compilation, analysis and dissemination in Myanmar?

In Myanmar, the Central Statistical Organization (CSO) is the only authoritative organization that has the mandate to collect, process, organize and supply data for the use of planners, policy makers and other users in the country and international bodies.

The Directorate of Livestock and Fisheries under the Ministry of Livestock and Fisheries is conducting the data collection, compilation, analysis and dissemination for fisheries and livestock sector.

Department of Fisheries is basic responsible for fishery data collection, processing and dissemination and the existing system runs as follows: -

(a) Basic Unit

In Myanmar, there are 370 townships in the whole country but DoF township officers are totally (110) persons. Some township officers cover more than one township, and all township fisheries officers have to provide and support in collecting the fishery data. That is why, we can say that all township fisheries officers are as the basic data collecting officers who are, at the same time, having their own duties to perform the works on fisheries.

(b) Data collection, processing and dissemination

Reporting of the statistical data and collection from Township level to District and then to State and Division where the data is edited and collected, before being sent to statistical office, HQ of DoF. All organized data in DoF are processed step by step before presenting final results. Data processing is done either manually or using computers.

(c) Collaboration with the other Department for fishery statistics

Department of Fisheries of Myanmar has been collaborating with the Central Statistical Organization (CSO), and National Planning and Economic Department as well as Directorate of Livestock and Fisheries. Moreover, DoF has been coordinating with the Myanmar Fisheries Federation (MFF) which is one of the highest NGOs commercial organizations to encourage and promote fishery industries of Myanmar. DoF has been coordinating with other governmental agencies, such as Settlement and Land Records Department (SLRD), Ministry of Agriculture and Irrigation, Custom Department , Ministry of Finance and Revenue, Department of Trade, Ministry of Commerce, Department of Population, Ministry of Immigration and Population.

Capacity Building on Improving Fishery Statistical System in Myanmar

The Department of Fisheries, Myanmar is working closely in collaboration and coordination with FAO, ASEAN-SEAFDEC and other international and regional organizations related fisheries in order to strengthen capacity building on improving fishery statistical system for the better management of fisheries so that its benefits can be shared among all people to provide data and information on fisheries.

MYANMAR FISHERIES FEDERATION

Department of Fisheries (DoF) and Myanmar Fisheries Federation (MFF) are like twins under the shadow of Ministry of Livestock and Fisheries' umbrella. In order to better manage the fishery sector, DoF and MFF has teamed up to work together to achieve our common goal as stated in our regional slogan:- "Fish for the people".

Myanmar Fisheries Federation is one of the highest NGO commercial organization to encourage and promote fishery industries of Myanmar as well as to support the fishermen and fish farmers.

In order to exchange information on the livestock and fishery sector, regular weekly meetings are held at the conference hall in the MFF every Tuesday since June 6, 2005. This meeting is attended by Brig-Gen Maung Maung Thein, Minister for Ministry of Livestock and Fisheries, heads of departments under the Ministry of Livestock and Fisheries, MFF officials, business men of the private companies, and those who take interest in livestock and fishery sector.

Myanmar Fisheries Federation performs many supporting roles.

- (1) MFF is able to support application made by its members to Department of Fisheries to undertake fisheries and aquaculture activities.
- (2) MFF also can recommend application to the Livestock and Fisheries Bank for loan application.
- (3) MFF has a good support from the government and can negotiate directly for members' benefits.
- (4) MFF also helps with negotiation of selling and harvesting of fish; and shrimp and working collectively.

There are many members with small property. The membership fee is Kyats: 300 per year and Kyats: 5,000 for life. Any individual interested in it can contact MFF for further information at the address given below:-
